

Turn incoming orders into data your team can use.

Reduce repetitive order entry with HALO on GB10.

Orders arrive as PDFs and scans. Your team reads reference numbers, dates, line items and amounts, enters them into a spreadsheet or business system, then checks the entries before passing them on.

HALO uses AI-powered document processing to extract those fields and tables into structured data. Your team starts with the extracted results, checks them against the original and corrects exceptions before use.

From an order document to a usable record

PDF or scan → Extract → Review → Export / API

Illustrative example using fictional data; not a measured extraction result.

INCOMING DOCUMENT

PURCHASE ORDER

PO-1042

Order date: 27 September 2026

Customer: Northbridge Supplies

A100 - Storage boxes

Quantity: 20 | Unit price: USD 12.50

Order total: USD 250.00

STRUCTURED OUTPUT FOR REVIEW

Order number **PO-1042**

Order date **2026-09-27**

Customer **Northbridge Supplies**

Currency **USD**

Order total **250.00**

LINE ITEM

A100 | Storage boxes

20 units x 12.50 USD = 250.00 USD

After review, the data can be exported or passed to a business application through an API integration. The required fields and destination are agreed for your workflow; connecting an existing system may require additional integration work.

Change where your team spends its time.

TODAY	WITH THE HALO WORKFLOW
Read each document and enter its fields and line items by hand.	Start with extracted fields and tables.
Check manually entered values against the original.	Review extracted values and correct exceptions before use.
Enter the same information again in the next application.	Reuse reviewed data through an export or a configured API connection.

HALO on GB10 combines preconfigured hardware, a one-year IDP license and local model configuration. The standard package includes setup guidance, one user training session and first-year frontline support. On-site installation is optional and quoted separately.

Check the value against your own workload

For a representative batch, compare the time spent entering data, reviewing and correcting results, and moving the output to the next task. Check processing time against your turnaround needs as well. This shows whether the complete workflow reduces work for your team.

Want to see sample results first?

Share a few representative documents and the fields you need. HALO's AI-assisted workflow setup helps us prepare a sample walkthrough so you can compare extracted results with the originals and discuss any adjustments.

Sample assessment is optional; scope and turnaround depend on your documents. You can request pricing without samples. If GB10 is too small for your workload, we can discuss a larger appliance.

Get a quote for your document workflow.

Contact the sales representative who shared this sheet. Start with your document types and approximate daily or monthly volume.

Ask for the standard package price, included software, license terms and support. Additional integration work can be quoted separately.
